SUMMARY

Full-stack developer with hands-on experience across the whole web stack — React and Tailwind on the frontend, Node.js/Express and Django on the backend. During a recent internship I built three complete applications from scratch (an e-commerce store, a social platform, and a project management tool), each with secure authentication, real database persistence, and a full user journey from sign-up to core feature use. Currently a Computer Engineering student at FUTO with a 4.22 CGPA, looking to bring that same hands-on, build-it-end-to-end approach to a development team.

EXPERIENCE

Full-Stack Developer Intern — CodeAlpha
13 April 2026 – 20 May 2026

- Built three progressive full-stack projects from the ground up, each covering a different real-world use case: e-commerce, social media, and project management.
- Designed and implemented backend REST APIs (Node.js/Express, Django) alongside the matching React frontends for each project.
- Implemented authentication and authorization using JWT, and applied web security practices including CORS configuration, across all three apps.
- Worked with MongoDB for data persistence, focusing on scalability and a smooth, secure user experience from registration through checkout or core feature use.

PROJECTS

FashHub — Full-Stack E-commerce Store

- Built a complete online fashion store from scratch where customers can browse products, manage a shopping cart, and place orders.
- Built an admin side for inventory management, and secured the full user journey — registration, login, and checkout — with persistent data storage.

ED — Full-Stack Social Media Platform

- Built a mini social networking app where users create profiles, post content, follow others, and like/comment on posts.
- Implemented a personalized feed and account security features, including real email-based password resets.

Layn — Full-Stack Project Management Tool

- Built a Trello-inspired collaboration tool where teams create projects and organize work into To Do / In Progress / Done boards.
- Added task assignment, real-time comments, and a dashboard showing live project health stats.

SKILLS

- **Frontend:** HTML5, CSS, JavaScript (ES6+), React, Tailwind CSS
- **Backend:** Node.js, Express.js, Django
- **Databases:** MongoDB (NoSQL)
- **APIs & Security:** RESTful API design, JWT authentication and authorization, CORS

EDUCATION

Federal University of Technology, Owerri (FUTO)
B.Eng. Computer Engineering — 2nd Year (200 Level) · CGPA: 4.22
